

iVAS Technology Protects Your Kids from Danger

According to the news from Dongjiang Times, one 6-year-old boy suddenly collapsed on the retrograde escalator of the Huizhou Huamao Tiandi Mall on the evening of May 11th, with breaking off his right hand's fingers. But fortunately, the broken fingers were found indeed. After the surgical treatment, the boy's fingers were successfully taken back on yesterday morning, though he still needed further cure and observation.

At the first eye-sight of this news, we could feel so sad about that such a young child needs to bear terrible pain. Somebody would attribute this case to the parents' carelessness. Others also assert that the shopping mall should take the responsibility. Anyway, what is the most important is that we need consider more about how to take technological measures to reduce those tragedies.

Accordingly, the iVAS system has one function of preventing retrograde motion, which can immediately send alerts to monitoring personnel to take effective responsive measures while effectively detecting the retrograde person in the target area. Thus, we are supposed to assert, the tragedy could be avoided completely the as the boy played in retrograde escalator connected to the iVAS system.

However, the iVAS system is a high-tech product we can't live without, which bring a safe and harmonious life model. Meanwhile, Anxin-China always believes that the iVAS can present an abundant of advantages and edges to our future smart life, which is like the Apple company brings us with iPad, iPhone, MacBook Pro...and et al!
