

## Anxin-China's Supports for the State's Air Pollution Prevention Plan

Presently, the State's Council has released the *Air Pollution Prevention Action Plan*, which proposed 10 items more than general requirements, motivational objectives as well as concrete methods. Herein, this plan put an emphasis on the aspects of strengthening the comprehensive governance, building the reliable surveillance and precaution systems and implementing emergency rescue solution according to the previous pre-planned one. Obviously, it is a sign that the State has a strong decision to solve the air pollution issue. Wang Jian, the vice-director of Pollution Prevention Department, State's Ministry of Environmental Protection, stated that this action plan needed a more suitable series of economic policies and laws, rooted in the energy structures and industrial structure and et al, more than simple air governance. Thus, we can see that how important a perfect surveillance and management system is in the environmental protection area!

China set its foot in the environmental protection business since 1972, as it is well known to all, and then got through all kinds of stages. In the 21<sup>st</sup> century, our environmental policies have gradually stepped out of the traditional model of "governance after pollution", and then begin to focus on monitoring the origins of pollution. Accordingly, Anxin-China has been always been developing the advanced high-tech systems with an aim at making our living natural environment better. Anxin-China's Environmental Protection Real-time Remote Monitoring System, applies available information technologies to monitor the origins of pollution and environmental quality effectively for a long time, so that the environmental department can keep a high working efficiency. If the key enterprise installs such a surveillance system, the local environmental department can completely acknowledge the specific conditions of its exhaust gas emission in real time through a remote way. And then, as the unexpected thing happens, the surveillance department can immediately implement the emergency rescue plan to realize the coordination between emergency and command, reducing the losses to the minimum extent.

However, it is well known that the atmospheric environment makes a big influence on all human beings no matter who you are, or how much money you own. The pure, fresh air is the basic premise for us to do anything. Anxin-China always spares no efforts to provide you with a safe, clear natural environment. Anxin-China sticks to the principle that “your health is our business” !
