

## **Anxin-China Concentrates on Protecting the School-bus Trip**

The school bus is a major tool for children to go to school and get back home. At the same time, the children is the special vulnerable group in the society, which is worthy of governmental leaders' particular concerns. Recently, the big traffic accidents occurring in Qinjiang, Henan and Xuzhou, Jiangsu respectively hurt us so much while the death of child in the school-bus made several families broken.

According to related data, almost 18.5 thousand children less than 14 years old, died from the traffic accidents every year. Herein, the causes are various including inadequate or careless driving, overloading, over-speed, disadvantaged vehicle surveillance, and et al. Anyway, there are different operation models in many areas, which lead to non-uniform approaches or solutions directly. Thus, we can develop the best united solution in the software aspect instead hardware one.

At present, it's known that the traditional vehicle surveillance system cannot meet with the requirements of school-bus. It's urgently required to adopt a brand new scientific management method to solve a series of existing issues, for instance, school-bus driver face recognition punching in, getting-on-bus students counting, and driving HD video surveillance and et al. Those measures can effectively prevent the illegal behaviors, and record the on-site conditions for later use.

However, children are always our hope, and thus the protection of school-bus means our children can be safer. Accordingly, Anxin-China takes responsibility to providing them with eternal happiness, through reducing the potential risks.
