

Leaders from Shenzhen Committee United Front Work Department and Shenzhen Industry & Ecommerce Association Visited Anxin-China for Investigation

The conference site.

(Shenzhen- July 4th, 2013) Zhang Siping leads other leaders from Shenzhen Municipal

Committee United Front Department and Association of Industry and Ecommerce to visit Anxin-China for further investigation and study. Accordingly, M. Liu Zhongkui, M. Lin Supeng and M. Li He, who were Anxin-China' s senior executives, warmly welcomed the group of government leaders, and then held an investigation conversation in Anxin-China' s Headquarter in Shenzhen.

In the process of investigation and survey, M. Liu Zhongkui the CEO of Anxin-China introduced the company' s development conditions to those government leaders. Specifically, Anxin-China Holdings Limited (Anxin-China), with market value over 5 billion HKD as of 31 December 2012, is a public company listed in the Hong Kong Stock Exchange (HKEX). Being a leading industrial and public safety integrated solution provider & operator in China, Anxin-China always devotes itself to providing intelligent security systems for both public security and industrial safety production areas. Mr. Liu also added that the corporate business had expanded from the safety security area into the public security area; or, in another saying, its major security surveillance system product line also covers the ISS system, including ISD, iVAS, ITS and etc. However, both Mr. Li and Mr. Liu accurately introduced the key points of Anxin-China' s intelligent security systems and hardware equipments, as well as the practical applications of iVAS in the public security area.

Thus, those leaders from Shenzhen Municipal Department became very interested of Anxin-China' s numerous products after hearing the detailed prospects about Anxin-China. They stated that they would like to see such a great corporation had made so many contributions to smart security areas, which were greatly worthy of all participants' appreciation. In addition, all of them hoped that Anxin-China would constantly develop its advanced products and technologies, to expand its advantageous entities to promote the construction of smart city and safe city.

Moreover, considering the company' s business development cannot be fulfilled in Anxin-China' s Shenzhen Headquarter, Anxin-China has transferred its major business into its subsidiaries in other cities, and the new headquarter base building is in the predicted output. Anyway, this strategy aims to present its technical advantages to promote the business expansion. Presently, Anxin-China has proposed some materials to the municipal committee for investigation procedure, or it can be said that Anxin-China needs the supports of Shenzhen municipal committee. Also, those leaders have proclaimed that those issues would be solved as soon as possible under the assistance of Shenzhen Municipal Government, and thus Anxin-China could make a concentration on the security surveillance business area with bringing more benefits for the society.

Therefore, Anxin-China accepted this great mission with pleasure.
