

Anxin-China Achieves Security Protection Practically and Effectively

One storage tank disaster suddenly happened in PetroChina Dalian Petrochemical Company on June 2th, with 2 dead and 2 missing, People.com.cn reported on July 23th. Actually, this is the sixth serious case within Dalian branch of PetroChina since July 16th, 2010. On July 21th, Zhou Jiping, the Chairman of PetroChina board of directors, went to Dalian Petrochemical Corporation to hold a meeting of heads, who directly appealed Duan Liangwei as the general manager, and Jing Yuzhong as the deputy general manager; herein, the original appointers were removed from these positions.

There are six serious accidents with Dalian Petrochemical within four years. Anyway, this is another time that we feel so much pitiful and sad about such a serious security case, while the positions removal of related heads cannot get back the victims' lives as well as the natural environment. What can be forgiven is the natural disaster instead of man-made accident, thus, Anxin-China takes its responsibility to develop a series of technological achievements to protect the whole city. For instance, ISD system is specially designed to serve safety and environmental departments to protect our living environment, which can be effectively applied in safety information checking, pre-alerting, rescue, management and et al. It comprehensively monitors all potential risks and dangerous elements, so that relevant personnel can take measures to reduce, or avoid any life casualties and loss of financial properties. Of course, the surveillance personnel and related regional duty heads are required to receive professional training.

Therefore, we can acknowledge that administrators should think of effective means to further strengthen the crisis and responsibility awareness; in addition, Anxin-China is required to keep researching and developing security surveillance systems to assist heads and administrators at all levels to prevent major safety accidents at its most fundamental.
