

## China's first "three-in-one" Elevator Label Unveiled at the Remote Surveillance System Promotion Conference

Liao Yuanfei, the deputy director of Shenzhen Markets Authority, made a statement in the conference.

(Shenzhen-Nov. 18th, 2013) Shenzhen Markets Authority held a remote surveillance

system promotion conference in Cedar Mansion on the morning of Nov. 18th, which meant that China' s first "three-in-one" elevator label was formally put into service.

At the beginning, Zhang Shaobiao, the head of special device administration of Shenzhen Markets Authority, introduced the "three-in-one" elevator label as well as its operation conditions on the spot. In the process of analyzing the elevators' current operation mechanism, he also pointed out lots of potential risks including imperfect elevator security regulations and relational technologies, insufficient implementation of responsible unit in using and maintaining elevators.

Moreover, the corresponding solutions were presented in connection with the "three-in-one" elevator label, which added QR code, elevator maintenance label and elevator insurance label in addition to the elevator usage label. Thus, the elevator could reveal its complete usage and security information clearly. According to the orders from Shenzhen elevator safety surveillance model reform implementation plan, Shenzhen Markets Authority decided to put the "three-in-one" elevator label into use formally, with indicating that the public had the rights to be informed to supervise the elevator operation. Thus, the potential risk could be reduced to the minimum extent to promise the public safety.

For another, Shenzhen Altus Technology Development Co., Ltd, a high-tech internet-of-things corporation devoted to developing elevator remote surveillance system, made an industrial report about the system' s operation mechanism and model. After hearing the details about how it protected the elevator under a normal operation, Shenzhen Markets Authority, and other property management companies spoke highly of such an effective information surveillance platform.

However, the system can bring the elevator' s safety information into the public' sight, and improve the maintenance & rescue mechanism to prevent more accidents happening in the elevator. In addition to monitoring the elevator in real time, the system can also inform security personnel through lots of approaches, so as to avoid a second harm in the elevator.

Finally, against the elevator' s safety operation conditions in the current stage, Liao Yuanfei, the deputy director of Shenzhen Markets Authority, made a conclusion that total elevators amounted to 110 thousand units, with a growth rate at 10 thousand units every year, ranking first in Guangdong province and third in China. At the same time, the elevators in Shenzhen stayed in a status filled with potential risks in recent years, which

required a new operating mode under legal restraints and residents' supervision. Anyway, the key point was to ensure the maintenance and insurance corporations to implement the security defense measures seriously, to produce the safe operation of elevators. Moreover, Shenzhen Markets Authority had released the No. [2013] 592 file, requesting most public places, for instance, governmental buildings, schools, hospitals, train stations, shopping malls, exhibition halls, parks and etc, to exchange the new "three-in-one" elevator labels during the period from Dec 1st, 2013 to May 31st, 2014.

After Mr. Liao Yuanfei' s statement, the first "three-in-one" elevator label was formally unveiled on the spot, which meant the new "three-in-one" label exchange project started.

In such an on-the-spot promotion conference, Shenzhen Markets Authority presented its strong strengthen and capability in improving the social safety, especially the elevator security surveillance. The elevator safety is one of the key points in the construction of safe cities, and Anxin-China will concentrate on it constantly.
