

Environmental Surveillance ISD System to be the Next Profitable Project for Anxin-China

(Qingdao, Shandong-May 2nd, 2013) Located in Qingdao City, Wusi Square's surrounding waters is filled with red waste water constantly expanding extent, which surprised lots of guests. On site, the polluted water was terra cotta color, which presented to be obviously different from other blue seawater. Many people said that Wusi Square stands for the total image of Qingdao and the local environmental pollution meant a deadly attack to the whole travelling industry of Qingdao City.

This news led us to think about the issue of China's environmental protection seriously, and to find an applicable solution to work the water pollution problem more scientifically and effectively. Since so far, the environmental protection attracted our so much attention, while no company or institution proposed a series of practical surveillance means accordingly. Herein, Anxin-China has always been developing the environmental ISD system, in order to introduce the security surveillance model into the environmental protection area.

Indeed, the construction model of environmental protection ISD system is almost the same with the security ISD system's one, except that security ISD majorly monitors key kinds of gas in the security incidents while the environmental protection ISD aims to core environmental protection indexes. Virtually, the old environmental protection surveillance model is out of date because of its inefficiency, while lots of enterprises get used to the solution that "you come, I manage; you leave, I let off". Simultaneously, water pollution has many common places with security incidents, for instance, weak administration will bring out uncorrectable losses. The last Qingdao red water pollution case made both economic and other invisible losses. Thus, Anxin-China makes the conclusion that it's very appropriate to introduce security surveillance model into environmental protection surveillance model, with laying down a brand new milestone of environmental protection surveillance area.

Specifically, Anxin-China's advanced surveillance model with complete edges will attain the

acceptance of State Environmental Protection Department, if Anxin-China's environmental protection ISD system could be built in two pilot cities successfully. In terms of the present market conditions, no other corporation introduces such a creative conception in the environmental protection surveillance area. Therefore, Anxin-China will get great earnings if the environmental protection ISD construction plan succeeds in pilot cities. Now, this fabulous environmental protection ISD system has got many partners' approval. Then, with the promotion project goes in constant depth, Anxin-China undoubtedly will hold a competitive status and make big earnings in the environmental protection surveillance market.
