

Anxin-China Provides the Solution for the Fire Accident in Guangming New District, Shenzhen

At 1:30 AM, December 11, 2013, a major fire accident occurred in one farmers market, which was located in Guangming New District, Shenzhen, and the fire-covering area reached 1,000 square meters. The local fire department put off the accident at 3:00 PM. According to the official information statistics, this accident led 16 deaths and 5 injured. At present, the boss of farmers market has been controlled by the policemen for further investigation.

This accident happened at midnight and made a terrible loss, therefore, which meant some families became broken. One woman wanted to get back 100,000 RMB from the shop, and unfortunately died in the room, an insider revealed. In the beginning, only two or three shops were on fire, however, as the fire fighters arrived at the market, the fire covered more than 10 shops due to the imperfect fire fighting devices. It's surprising that the fire hydrant in the market had no water actually, and the fire fighters had to spend a great deal of time and strengthen to get water from far away. In view of the

reason of this fire accident, the safety inspection was not in place, the deployment of fire fighting devices was imperfect, production, storage and living places were kept in one market..., all those human errors created such a awful tragedy.

However, Anxin-China always believes that safety is first. Governmental department and enterprises have the obligations and responsibilities to ensure the public safety. Before accidents happen, relational safety supervision departments should fulfill their job to make sure the standard deployment of fire fighting devices locally, and then formulate the emergency rescue measures in advance. Herein, Anxin-China' s iVAS system can effectively monitor the target environment, analyze the video pictures intelligently and send the abnormal conditions to the surveillance personnel in real time, so as to reduce the losses to the minimum extent. Any carelessness would lead to unexpected losses in the public safety area. Anxin-China feels very sad for this fire accident, and strongly firms the belief that Anxin-China will always spare no efforts to develop and improve security and protection systems to prevent any social, potential safety hazards. Moreover, all the time, Anxin-China works hard in China' s security industry, and aims to provide the stable safety guarantee for the public' s life and financial properties. 🌀
